

Lead-free, high activation, water soluble solder wire

Description:

Interflux[®] **Aquasol 4018** for lead-free alloys is a solder wire with water soluble flux residue. It is highly activated for increased wetting on surfaces that are difficult to solder or degraded and oxidised surfaces.

Aquasol 4018 residue must be cleaned. Cleaning is easily done with demi water of 35— 45°C (95°F— 114°F) with or without the aid of a saponifier.

Aquasol 4018 can be used in both hand soldering and automated soldering processes.

Aquasol 4018 solder wire contains halogens and is classified as OR H1 according to IPC and EN-standards.

Products pictured may differ from the product delivered

Key properties

- Water soluble flux residue
- High wetting power on surfaces that are difficult to solder.
- Suitable for automated soldering

Availability

Flux type: IF 4018
Flux content: 2,5% w/w

alloy
Sn99,3Cu0,7
Sn96,5Ag3,0Cu0,5

Other alloys upon request

• = available

melting point
+/- 227°C
+/-217°C

• = upon request

diameters						
0,35	0,50	0,70	1,00	1,50	2,00	
•	•	•	•	•	•

Other diameters upon request

Work Instructions

Manual soldering

The advised working temperature is between 320°C and 390°C. For more dense metals like Nickel, the temperature may be elevated to 420°C.

The use of a good soldering station is important. Use a soldering station with a short response time and with enough power for your application.

Choose the correct soldering tip: to reduce the thermal resistance, it is important to create a large contact area with the surfaces to be soldered.

Heat up both the surfaces simultaneously. Slightly touch with the solder wire, the point where soldering tip and the surfaces to be soldered meet (the small quantity of sol-

der ensures a drastic lowering of the thermal resistance). Add subsequently without interruption, the correct amount of solder close to the soldering tip without touching the tip. This will reduce the risk on flux spitting and premature flux consumption!

Post solder residue needs to be cleaned. This can be

done with demi water of 35— 45°C (95°F— 114°F) with or without the aid of a saponifier.

Handling

Storage

Store the solder wire in a dry and clean environment at ambient temperature.

Handling

To avoid spool and wire damage, handle package with care.

Test results

Conform EN 61190-1-3(2007) and IPC J-STD-004(A)

Property	Result	Method
Chemical		
flux designator	OR H1	J-STD-004A
	F-SW 25	DIN 8511
	2.1.2	ISO 9454
% halide content	>2%	
Environmental		
qualitative corrosion, flux	pass (cleaned)	J-STD-004A IPC-TM-650 2.6.15
electro chemical migration	pass (cleaned)	J-STD-004A IPC-TM-650 2.6.14.1

Packaging

Spools of 500g

Trade name: Aquasol 4018 Lead-free, Water Soluble Wire
